

BEE ANGLIA CASE STUDY

BACKGROUND:

Liquid11 is an innovative technology company focusing on the integration of telecommunications and cloud-based solutions to help businesses grow.

ACTIONS:

Liquid11 is very aware of limiting its carbon emissions and had already installed energy efficiency measures during a recent refurbishment. The company is keen to minimise the running costs and emissions associated with an extension it has planned.

The BEE Advisor recommended installing an air source heat pump system to provide space heating for their new extension. In preference to direct electrical heating, this can save approximately 9,504kWh/year (£989 and 5.5tCO₂e).

Another suggestion was to install LED lighting throughout the new extension. This is estimated to save 4,897kWh per year (£510/year and 2.8tCO₂e) when compared to traditional lighting equivalents.

"BEE ANGLIA OFFERED GREAT ADVICE AND PRACTICAL HELP WITH OUR PROJECTS, I'D RECOMMEND ANY BUSINESS TAKE THE TIME TO SEE HOW BEE CAN HELP THEIR BUSINESS"

Grant Hardy, Liquid 11
